

**Contents:**

QTY 1 EPAS-40-1000 Steering Module.

1. Supply power and ground to the module and connect the plug to the steering rack
2. Powering the rack is the responsibility of the installer. It requires a 100 amp fused circuit. The best way to do supply power is to order Ford P/N BL3Z-3F720-A wiring harness. This harness has plenty of length and has all the connectors already on it. It can be modified to add the 100A fuse or breaker as appropriate.
